Create stack
Step 2
Specify stack details
Step 3
Configure stack options
Step 4
Review and create
Specify stack details
Provide a stack name
Stack name
c52-ta2
Stack name must contain only letters (a-z, A-Z), numbers (0-9), and hyphens (-) and start with a letter. Max 128 characters. Character count: 7/128.
Parameters
Parameters are defined in your template and allow you to input custom values when you create or update a stack.
NotificationEmail
Email address that will receive processing alerts.

Tags - optional
Tags (key-value pairs) are used to apply metadata to AWS resources, which can help in organizing, identifying, and categorizing those resources. You can add up to 50 unique tags for each stack.
No tags associated with the stack.
Add new tag
You can add 50 more tag(s)
Permissions - optional
Specify an existing AWS Identity and Access Management (IAM) service role that CloudFormation can assume.
IAM role - optional
Choose the IAM role for CloudFormation to use for all operations performed on the stack.
IAM Role Name
Choose an existing role
Create new role
Stack deployment options
Express mode - new
Deploy infrastructure quickly with no rollback delays. Ideal for development iteration where you need quick feedback and debugging.

Stacks
Create stack
Behavior on provisioning failure
Specify the roll back behavior for a stack failure. Learn more
Roll back all resources
Roll back the stack to the last known stable state.
Disable rollback
Preserves the state of successfully provisioned resources, while rolling back failed resources to the last known stable state. Resources without a last known stable state will be deleted upon the next stack operation.
Delete newly created resources during a rollback
Specify whether resources that were created during a failed operation should be deleted regardless of their deletion policy. Learn more
Use deletion policy
Retains or deletes created resources according to their attached deletion policy.
Delete all newly created resources
Deletes created resources during a rollback regardless of their attached deletion policy.
Validations - optional
Specify the deployment validation settings for stack creation.
Disable deployment validations - new
Skips template validation before deployment. Errors may surface during stack creation. Learn more
Additional settings
You can set additional options for your stack, like notification options and a stack policy. Learn more
Stack policy - optional
Defines the resources that you want to protect from unintentional updates during a stack update.

Stacks
Create stack
Rollback configuration - optional
Specify alarms for CloudFormation to monitor when creating and updating the stack. If the operation breaches an alarm threshold, CloudFormation rolls it back.
Notification options - optional
Specify a new or existing Amazon Simple Notification Service topic where notifications about stack events are sent.
Stack creation options - optional
Specify the timeout and termination protection options for stack creation.
Capabilities
The following resource(s) require capabilities: [AWS::IAM::Role]
This template contains Identity and Access Management (IAM) resources that might provide entities access to make changes to your AWS account. Check that you want to create each of these resources and that they have the minimum required permissions. Learn more
I acknowledge that AWS CloudFormation might create IAM resources.
